DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities: Applicant's representative is required to update the information in the specification on page 1, continuing data with serial # 09/524,775 to add "now patent no. 6,701,367". Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Smith (U.S. Patent No. 5,835,724).

As to claims 1, 7, 13, Smith discloses a computer implemented method and apparatus with readable medium for servicing client requests comprising receiving multiple associated client requests (from clients 12, 14, 16 as shown in Fig.1); in response to each of the associated client requests; invoking an application (considered as the data session 32); determining, based upon the application, a session manager (24) to associate with the application (32); and invoking the session manager to manage

Application/Control Number: 10/665,637

Art Unit: 2144

state information for application across multiple associated client requests (considered as establishing connection, See abstract).

As to claims 2, 8, 14, Smith discloses the session manager is invoked via programming interface (30) (See col. 4, lines 42-67; col. 5, lines 1-24).

As to claims 3, 9, 15, Smith discloses programming interface as discussed and further discloses a definition of an abstract class, and wherein the session manager (24) is a subclass of the abstract class (considered as the state hierarchy as child state (subclass) and ancestor state (abstract class)) (See col. 5, lines 8-16; col. 6, lines 41-67; col. 7, lines 1-44).

As to claims 4, 10, 16, Smith discloses the session manager (24) comprises an implementation for each method defined for the abstract class, and wherein the session Manager (24) is invoked by invoking a particular method implementation provided by the session manager (See col. 6, lines 6-40).

As to claims 5, 11, 17, Smith discloses the associated client requests are associated with each other by way of a session ID (See col. 5, lines 65-67-col. 6, lines 1-6).

As to claims 6, 12, 18, Smith discloses determining a session manager (24) to associate with the application comprises accessing a set of configuration information which specifies which session manager to associate with the application (See col. 5, lines 13-32).

Art Unit: 2144

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-18 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-9 of U.S. Patent No. 6,701,367. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious to one of ordinary skill in the art at the time of the invention to have a first session and a second session manager that is associated with the application; and invoking via a programming interface because it would perform the same result for a computer implemented method for servicing client requests.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
